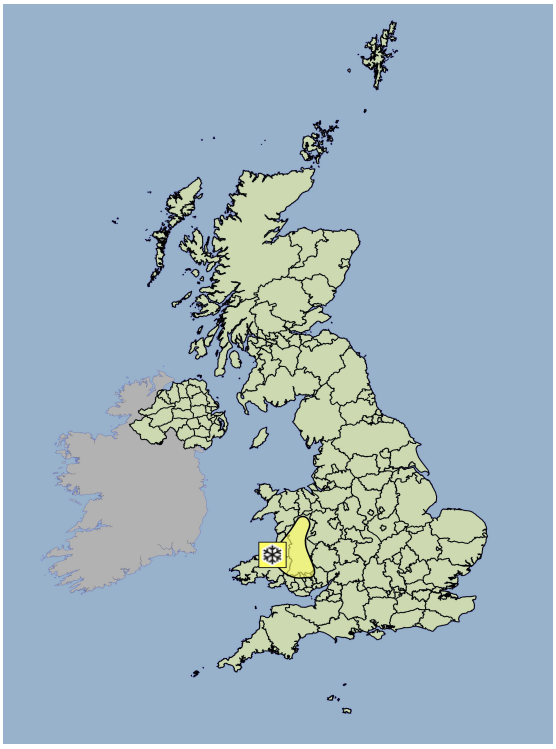
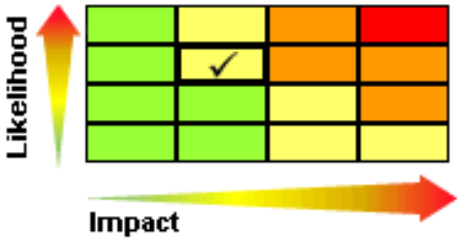
National Severe Weather Warning Service





Chief Forecasters Assessment
A cold and deeply unstable westerly airstream covers the area. A trough running through the flow is bringing a cluster of heavy showers which are likely to turn wintry, leading to localised snow accumulations. The showers should clear away eastwards later this morning before further wintry showers move in from the west this evening (please see separate yellow warning).

The Met Office have issued a **Yellow Warning** of **Snow**

Valid from **08:15 on Tue, 13th Jan 2015** until **11:00 on Tue, 13th Jan 2015**

A cluster of heavy sleet, snow and hail showers will move eastwards across parts of Wales this morning. These will lead to accumulations of 2-5 cm in places, chiefly on ground above about 100 m, with perhaps 5-10 cm above 250 m.

The public should be aware of the potential for difficult driving conditions.
